

# Silverline RG59+2 Coaxial Cable

Silverline RG59+2 coaxial cable has two extra cores attached for low voltage transmission saving installers time and money by not having to run separate cables. RG59+2 also looks much neater.

The combined foil and 24 wire core provides enhanced shielding for the video signal against external interference. This gives great benefits over some other varieties of coax.

## Silverline Coaxial Cable

Core	Solid copper core 0.71mm
